SOFTWARE ENGINEERING

Current Community

The RSE Association of Australia and New Zealand (RSE-AUNZ) currently has 353 members. The RSE Asia Association has recently been established.

About the Unconference

This is the very first online Research Software Engineer (RSE) Asia Australia Unconference. This gives you a unique opportunity to reach an emerging international community of RSEs.

This joint partnership will allow you to reach an international multi-disciplinary audience of RSEs that are critical to underpinning the reproducibility and accuracy of research now and in the future.

The 2019 RSE in-person mini-conference attracted around 50 participants, and local meetups in 2019 had up to 50 participants. For this reason we anticipate over 100 participants for this unconference.

Partnership Opportunities

By partnering with us, you will be helping to raise awareness not only of your organisation, but of the importance and value of RSEs as a community and as individuals. This would be especially advantageous for organisations wanting to target a technology-savvy, multi-disciplinary audience that is relied on to provide advice for technology decisions.

Key partnerships are available for an investment of $3,000 AUD and the Allied partnerships are available for an investment of $1,000 AUD.
